[[DATE]]

[[COMPANY]]
[[CITY, COUNTRY]]

Dear [[HIRING MANAGER NAME, or "Hiring Team"]],

I am applying for the [[ROLE TITLE]] position at [[COMPANY]].

I am a backend engineer with four and a half years in C# and .NET. I work on a large-scale eDiscovery platform used by US federal agencies - document and email processing at volume, Freedom of Information Act workflows and multilingual ingestion. That combination of legal-records domain work and .NET engineering is uncommon, and it is what I would bring to your team first.

Two examples. Our email processing ran as a sequential job taking seven to ten hours; I rebuilt it as an event-driven flow on AWS SES, EventBridge and SQS with concurrent consumers, bringing a full run down to about an hour and a half. More recently I consolidated eleven near-identical counting queries into two, which took a job from fifteen to twenty minutes down to three or four, on twice the documents.

[[WHY THIS COMPANY - two or three specific sentences. Name the product, the technical problem, or the part of the stack you want to work on. Reference something you actually read: their engineering blog, their docs, or a line in the job description. Generic praise is worse than writing nothing.]]

On practicalities: I am an Indian citizen based in India and would need sponsorship. I am specifically looking to make this move rather than exploring options, and I can relocate at short notice.

I have attached my resume and would welcome the chance to talk about the role.

Sincerely,
Rahul Patel
