Rahul Patel

Backend Engineer | C# / .NET Core / ASP.NET Core / ASP.NET MVC | SQL Server, PostgreSQL | AWS
rahulpatel.bca10@gmail.com | +91 9904300297 | linkedin.com/in/rahul-patel-889459229
Total Experience: 4.5+ years | Surat, Gujarat | Notice period: 60 days | Open to relocation: Bangalore, Hyderabad, Pune, Gurgaon, Mumbai, Ahmedabad

PROFESSIONAL SUMMARY

Backend engineer with 4.5+ years building and maintaining enterprise .NET applications in C#, ASP.NET Core, ASP.NET MVC and ASP.NET Web API. Day-to-day work is REST API design, event-driven and queue-based processing on AWS (SES, EventBridge, SQS), Entity Framework Core and LINQ, and T-SQL query and index tuning on SQL Server and PostgreSQL. Currently on a large-scale eDiscovery (LegalTech) SaaS platform serving US federal agencies, across document and email ingestion, FOIA workflows and the modernization of a large legacy codebase. Comfortable owning a feature end to end - schema, API, queue consumer and the SQL behind it.

TECHNICAL SKILLS

Languages: C#, T-SQL, JavaScript
Backend: .NET Core, .NET Framework, ASP.NET Core, ASP.NET MVC, ASP.NET Web API, EF Core, LINQ, Dependency Injection, Middleware, Async/Await, Multithreading, Background Services, Multi-Tenant SaaS
API & Security: REST API Design, Swagger, JWT, OAuth 2.0, Role-Based Access
Databases: SQL Server, PostgreSQL, T-SQL, Stored Procedures, Query Optimization, Indexing, Execution Plans
Cloud & Messaging: AWS (SES, EventBridge, SQS), Redis, RabbitMQ, Event-Driven, Queue-Based Processing, Caching
Integrations: SignalR, WebSockets, Firebase Cloud Messaging (FCM), Stripe, PayPal, CCAvenue, Vonage, Google Maps, Third-Party APIs
Frontend (Basic): HTML, CSS, Bootstrap, jQuery, Angular
Version Control and Tools: Git (GitHub), TortoiseSVN, Azure DevOps (TFS), Postman, SSMS, Visual Studio
Practices: Agile (Scrum), SOLID, Design Patterns, Unit Testing (xUnit), Code Review, Performance Optimization, SDLC
AI-Assisted Development: GitHub Copilot, Claude AI (VS Code)

PROFESSIONAL EXPERIENCE

Software Engineer | Casepoint | Surat, India | May 2025 - Present

- Build and maintain backend modules for a large-scale eDiscovery (LegalTech) SaaS platform used by US federal agencies, in ASP.NET MVC and .NET.
- Cut a full email-processing run from 7-10 hours to approximately 1-1.5 hours, around 80% faster, by rebuilding a sequential job as an event-driven pipeline on AWS SES, EventBridge and SQS with concurrent consumers.
- Brought the embedding module's document-eligibility counts down from 15-20 minutes over 3 million documents, where the job also failed intermittently, to 3-4 minutes over 6 million, by consolidating eleven near-identical queries that differed only in their filter conditions into two set-based executions returning all eleven counts.
- Removed bottlenecks in high-volume document and email ingestion paths, measured by query execution time on SQL Server and PostgreSQL, by rewriting T-SQL and revising indexes against their execution plans.
- Extended FOIA request workflows and multilingual content processing to cover additional document and email ingestion paths, by building REST endpoints and background processing services in ASP.NET MVC and .NET.
- Shortened the time to isolate defects in a large legacy codebase, by tracing production code paths end to end before changing them and extending behind existing interfaces.
- Work in a cross-functional Agile (Scrum) team on Azure DevOps - sprint planning, backlog refinement, daily stand-ups, xUnit unit testing and peer code review with product, QA and engineering.

Junior .NET Developer | Vision Infotech | Navsari, India | Feb 2024 - Apr 2025

- Delivered new backend modules for client .NET applications end to end - database schema, REST API and release - by gathering requirements directly with clients and internal teams.
- Reduced data-retrieval times on client-facing screens, by rewriting SQL queries and stored procedures and adding the indexes and pagination the heaviest screens were missing.
- Restored service on production incidents, measured by time to resolution, by reproducing each failure against production-like data and shipping the fix.

.NET Developer | Zibma Infotech | Surat, India | Dec 2021 - Jan 2024

- Held application response times steady on production datasets exceeding 100,000 records, by tuning SQL queries, stored procedures and indexes, and paginating the heaviest reporting screens.
- Delivered ERP web modules used by multiple educational institutions, on ASP.NET and .NET Core Web API with SQL Server.
- Reduced repeat production defects, by tracing each issue to the responsible query or module and fixing the cause, not the symptom.

PROJECTS

VCDoctor - Telehealth Platform | Vision Infotech (client project) | ASP.NET MVC, SQL Server, SignalR, Firebase, Vonage, Stripe, PayPal

- Built backend REST APIs serving both web and mobile clients.
- Implemented one-to-one real-time messaging with SignalR, and Firebase Cloud Messaging for call notifications and multi-device signalling.
- Integrated Stripe and PayPal for payments, and Vonage for live video consultations.

HRMS - Human Resource Management System | Vision Infotech | .NET Core Web API, Angular, SQL Server

- Built employee management and payroll functionality behind a .NET Core Web API consumed by an Angular front end.
- Cut page load times, by optimizing SQL queries and adding server-side pagination.

Zibma School ERP - Education Management System | Zibma Infotech | ASP.NET, .NET Core Web API, SQL Server, Firebase

- Built .NET Core Web APIs and integrated them into an existing ASP.NET application serving multiple institutions.
- Delivered role-based access and custom reporting, and integrated Google Maps, PayPal and CCAvenue.
- Implemented Firebase notifications for attendance, fee and announcement events.

PROFESSIONAL DEVELOPMENT

Actively deepening, alongside full-time work: .NET runtime internals (async/await state machine, garbage collection, thread pool, ASP.NET Core request pipeline); distributed systems and system design (queue-based architectures, delivery guarantees and idempotency, caching, replication, sharding and consistency trade-offs); SQL internals (indexing, execution plans, transaction isolation); and data structures and algorithms.

EDUCATION

Bachelor of Computer Applications (BCA) | Veer Narmad South Gujarat University (VNSGU), Surat, India | 2017 - 2020

LANGUAGES

English - professional working proficiency (working language in all roles) | Hindi - professional working proficiency | Gujarati - native
