THE INTERVIEW ACCELERATOR

16-Week Blueprint to DREAM COMPANIES

Stop Coding. Start Engineering | Mentored By ex Google amazon

16	4	80	3
WEEKS	PHASES	DAYS	TRACKS

DSA • HLD • LLD • INTERVIEW PREP

STRATEGIC APPROACH

The "No-Cramming" Philosophy

We don't cram; we compound.

Deep Work Sessions

Elite engineering skills cannot be rushed. We dedicate 48 sessions strictly to core concept building and pattern recognition.

Active Retention

Passive learning fails in interviews. We use spaced repetition to ensure you can recall complex algorithms under pressure.

Feedback Loops

Regular checkpoints and 1:1 analysis turn blind spots into strengths before you ever step into an interview room.

THE DIFFERENTIATOR

The "32-Day Advantage"

40%

of time dedicated to Spaced Repetition

How we use these 32 days:

- Mock Interviews
- Live Contests
- Debugging Labs
- Capstone Reviews

"This is how we ensure retention when you walk into the interview room."

Program at a Glance

A strategic blueprint to bridge the gap between candidate and top talent

v2026.1

TIMELINE

16 Weeks

80 instructional days focused on deep technical mastery.

STRUCTURE

60/40 Split

48 Core Sessions + 32 Spaced Repetition Days.

TRACKS

4 Pillars

DSA • HLD • LLD • Interview Simulation.

The Learning Rhythm

Labs
Daily Practice

Sprints
Timed Contests

Mocks
Peer & 1:1

Review
Feedback Loop

The Outcome

Bridging the gap between "knowing syntax" and engineering at scale.

FROM **Coder** → TO **Engineer**

Ready for FAANG machine coding & system design rounds.

High-Level Trajectory

A systematic progression from fundamentals to production-grade engineering.

DSA · Adv. DSA · HLD · LLD

PHASE I — 4 Weeks

The Foundation

Weeks 1–4

TRANSFORMATION

Develop strong algorithmic intuition. Stop memorizing code and start seeing patterns in data structures.

01

PHASE II — 4 Weeks

The Differentiator

Weeks 5–8

TRANSFORMATION

Master the hard topics (Graphs, DP) that filter 80% of candidates. Crack the technical screening rounds.

02

PHASE III — 4 Weeks

The Architect

Weeks 9–12

TRANSFORMATION

Learn to design scalable systems (HLD) for millions of users. Think in trade-offs and capacity planning.

03

PHASE IV — 4 Weeks

The Craftsman

Weeks 13–16

TRANSFORMATION

Write clean, extensible code (LLD) and design patterns. Crush the Machine Coding rounds with confidence.

04

01

PHASE I

Algorithmic Foundations

Weeks 1–4

PRIMARY GOAL

Stop memorizing code.
Start seeing patterns.

CORE THEMES

- Math & Complexity
- Array Mastery
- Hashing & Maps
- Recursion
- LL, Stacks & Queues
- Backtracking

PHASE MILESTONE

Week 4 DSA Mock + Review

Labs · Live Coding · Timed Sprints

PHASE I

Algorithmic Foundations

| Weeks 1–2 Breakdown

Goal: Start seeing patterns

WEEK 01 — The Building Blocks

- Day 1 — Time & Space Complexity — Basics
- Day 2 — Essential Math
  Primes, Sieve, GCD, LCM
- Day 3 — Array Mastery I
  Basics & Traversal
- Day 4 — Array Mastery II
  Two Pointers & Sliding Window
- Day 5 — Deep Work Lab
  Practice Lab + Doubt Clearing

WEEK 02 — The Art of Lookup & Recursion

- Day 6 — Array Mastery III
  Multi-dimensional & Prefix Sums
- Day 7 — Hashing & Hashmaps — High Priority
- Day 8 — Recursion
  Thinking clearly & base cases
- Day 9 — Binary Search
  Search Spaces & Algorithms
- Day 10 — Problem Solving Session
  Live Coding Walkthrough

PHASE I

Algorithmic Foundations | Weeks 3–4 Breakdown

Goal: Master Linear Structures & Branching Logic

WEEK 03 — Linear Data Structures

- Day 11 — Sorting Algorithms
  Merge, Quick, Heap
- Day 12 — Matrix Manipulation
  2D Array patterns & traversals
- Day 13 — Linked List I
  Structure & Reversal Techniques
- Day 14 — Linked List II
  Cycle Detection & Complex Ops
- Day 15 — Sprint: Timed Practice
  Rapid-fire revision & speed coding

WEEK 04 — LIFO, FIFO & Branching

- Day 16 — Stacks & Queues I
  Core Implementation & Standard Problems
- Day 17 — Stacks & Queues II
  Monotonic Stack (Next Greater Element)
- Day 18 — Backtracking I
  Permutations & Subsets
- Day 19 — Backtracking II
  N-Queens & Sudoku Solver
- Day 20 — Checkpoint: DSA Mock Test
  Performance Review & Gap Analysis

02

PHASE II

Advanced DSA

Weeks 5–8

PRIMARY GOAL

Conquer the "Hard" problems.
Pass the technical screen.

CORE THEMES

- Trees & Heaps
- Graph Theory
- DP Patterns
- Greedy vs DP
- Shortest Paths
- Pattern Recognition

PHASE MILESTONE

DSA Graduation Checkpoint

1:1 Mocks · Contests · Cycle Review

PHASE II

Advanced DSA | Weeks 5–6 Breakdown

Goal: Conquer the "Hard" problems

WEEK 05 — Hierarchical Structures

Day 21	Trees I	Binary Trees & Traversals
Day 22	Trees II	BST & View Problems
Day 23	Trees III	Heaps & Priority Queues
Day 24	Tree Practice Lab	Recursive vs Iterative approaches
Day 25	Mock Interview	1:1 Analysis & Feedback

WEEK 06 — The Graph Theory Deep Dive

Day 26	Graph I	BFS/DFS & Connected Components
Day 27	Graph II	Shortest Paths (Dijkstra/Bellman)
Day 28	Graph III	MST & Topo Sort
Day 29	Graph Lab	Graph Patterns & Disjoint Sets
Day 30	Cycle Review	Revision of Weeks 1-6

PHASE II

Advanced DSA | Weeks 7–8 Breakdown

Goal: Conquer the "Hard" problems

WEEK 07 — Optimization Problems

- Day 31 — Greedy Algorithms vs. DP Basics
- Day 32 — Advanced Dynamic Programming
  1D & 2D Solutions
- Day 33 — DP Patterns — LCS, Knapsack, MCM
- Day 34 — Mixed Bag Practice
  Recognizing patterns in random problems
- Day 35 — Contest
  Timed Coding Challenge

WEEK 08 — The Interview Simulator

- Day 36 — The Grand Revision
  Arrays → Graphs Connection
- Day 37 — "Leetcode Hard" Breakdown — Session
- Day 38 — Mock Interview 1
  Technical Screening Simulation
- Day 39 — Mock Interview 2
  Optimization Focus
- Day 40 — Milestone: DSA Graduation
  Checkpoint & Review

03

PHASE III

System Design & HLD

Weeks 9–12

PRIMARY GOAL

Think like a Principal Engineer.
Scale from 1 to 100M users.

CORE THEMES

- Requirements & APIs
- LB & Capacity Planning
- Databases (SQL/NoSQL)
- Sharding & CAP
- Kafka & Async Processing
- Caching, CDN & DNS

PHASE MILESTONE

🏁 **Capstone HLD: End-to-End**

Case Studies · Whiteboarding · Design Mocks

PHASE III

System Design & HLD

| Weeks 9–10 Breakdown

Goal: Scale 1 → 100M users

WEEK 09 — The Architecture Starter Pack

- Day 41 — Scaling Foundations — Vertical vs Horizontal
- Day 42 — Requirements & APIs
  REST/RPC & Capacity Planning
- Day 43 — Load Balancers & CI/CD
  Infrastructure Basics
- Day 44 — Case Studies Discussion
  Twitter & Uber Architecture
- Day 45 — Assignment: First Design
  Design your first system

WEEK 10 — Data at Scale

- Day 46 — Database Architectures — SQL vs NoSQL
- Day 47 — Sharding & CAP Theorem
  Partitioning strategies
- Day 48 — Async Processing
  Message Queues
- Day 49 — Deep Dive: Kafka
  Event-Driven Architecture
- Day 50 — Mock HLD Interview
  Focus on DB choices

PHASE III

System Design & HLD

| Weeks 11–12 Breakdown

Goal: Scale from 1 to 100M Users

WEEK 11 — Speed & Reliability

- Day 51 — Search Engines & Indexing
  ElasticSearch Basics
- Day 52 — Distributed Caching
  Redis & CDNs
- Day 53 — DNS & Networking
  Core Concepts for Engineers
- Day 54 — Distributed Locks ZooKeeper
- Day 55 — Whiteboarding Session
  Live Design Practice

WEEK 12 — Complex Systems

- Day 56 — Distributed Transactions
  Two-Phase Commit & Consensus
- Day 57 — Peer-to-Peer Systems
  Gossip Protocols
- Day 58 — Capstone HLD Project End-to-End Design
- Day 59 — HLD Mock Interview
  Scaling Focus
- Day 60 — Review & Gap Analysis
  Identify Architectural Weaknesses

PHASE IV

LLD & Design Patterns

| Weeks 13–16 Breakdown

Machine Coding Ready Clean Code

WEEK 13 — Object-Oriented Mastery

D61	Advanced OOP & UML Diagramming	Basics
D62	Creational Patterns	Factory/Builder
D63	The SOLID Principles	Core
D64	Refactoring Lab: Bad Code → Good Code	
D65	Assignment: LLD of a Game (Chess)	Project

WEEK 14 — Patterns in Action

D66	Structural Patterns	Adapter/Facade
D67	Behavioral Patterns I	Observer/Strategy
D68	Behavioral Patterns II	Command/State
D69	Patterns in Microservices	Real-world
D70	LLD Mock Interview	

WEEK 15 — Production-Ready Systems

D71	Concurrency & Multithreading in LLD	Advanced
D72	Designing Extensible Systems	Plugins
D73	Persistence Layer & Repository Pattern	DB
D74	Robust APIs & Error Handling	Design
D75	Case Study: Parking Lot / Movie Ticket	

WEEK 16 — The Final Polish

D76	Code Review Simulation	Process
D77	Full LLD Mock: Machine Coding	Major
D78	Capstone Walkthrough & Defense	Presentation
D79	Final Simulation: "Super Day"	
D80	Launchpad: Placement Strategy	Career

THE TRANSFORMATION

By Day 80: The Outcome

You are no longer just "practicing." You are engineering.

DSA Mastery

Solve unseen problems by identifying patterns instantly. Optimized reasoning under extreme time pressure.

System Architect

Whiteboard scalable architectures (e.g., Instagram-level) with clear trade-offs and capacity planning.

Code Craftsman

Write clean, modular, and testable code. Pass machine coding rounds with production-quality output.

Engineer Mindset

Think like an engineer at a top-tier product company. Shift from "getting it working" to "building it right."

NEXT STEPS: Resume Review | Mock Loops | Offer Negotiation

Ready to Launch
