Surat, India | Indian national - requires visa sponsorship | Available to relocate

PERSONAL STATEMENT

Backend engineer with over four and a half years in C# and .NET, currently building services for a large-scale eDiscovery platform used by US federal agencies. I work best on systems where throughput and reliability matter: my most recent piece of work replaced a sequential email-processing job with an event-driven pipeline on AWS SES, EventBridge and SQS, reducing a full run from 7-10 hours to roughly 1-1.5 hours. I am comfortable owning a feature end to end - schema, API, queue consumer and the SQL behind it - and I am looking for a backend role on a team that runs what it builds. I can relocate at short notice.

TECHNICAL SKILLS

Languages: C#, SQL, JavaScript

Backend: .NET Core, ASP.NET Core, ASP.NET MVC, ASP.NET Web API, Entity Framework / EF Core, LINQ, REST API design

Cloud and Messaging: AWS - SES, EventBridge, SQS; Redis; RabbitMQ; event-driven and asynchronous processing, queue-based workers

Databases: Microsoft SQL Server, PostgreSQL, query optimisation, indexing, performance tuning, database design

Real-time and Integrations: SignalR, Firebase Cloud Messaging (FCM), payment gateways (Stripe, PayPal, CCAvenue), Vonage, Google Maps, third-party REST APIs

Tools: Git, GitHub, Azure DevOps (TFS), TortoiseSVN, Postman, SQL Server Management Studio (SSMS)

Practices: Agile (Scrum), peer code review, SDLC, performance optimisation, production support, legacy modernisation

AI-assisted development: GitHub Copilot, Claude - reviewed and tested before commit

KEY ACHIEVEMENTS

- Cut a production email-processing run by around 80% - 7-10 hours down to roughly 1-1.5 hours - on a platform serving US federal agencies.
- Processed and reported on datasets exceeding 100,000 records in production ERP systems without degrading response times.
- Integrated three payment gateways across products - Stripe, PayPal and CCAvenue - plus Vonage video, SignalR messaging and Firebase multi-device push signalling.

PROFESSIONAL EXPERIENCE

Software Engineer | Casepoint LLC | Surat, India | May 2025 - Present

- Redesigned the email-processing pipeline from a sequential job into an event-driven flow on AWS SES, EventBridge and SQS with concurrent consumers, reducing a full run from 7-10 hours to approximately 1-1.5 hours - an improvement of around 80%.
- Build and maintain backend modules for a large-scale eDiscovery (LegalTech) platform used by US federal agencies, using ASP.NET MVC and .NET.
- Deliver backend features for FOIA workflows and multilingual content processing across document and email ingestion paths.
- Optimise SQL queries and indexing to remove bottlenecks in high-volume data paths on SQL Server and PostgreSQL.
- Read, refactor and extend a large legacy codebase as part of ongoing platform modernisation - tracing unfamiliar production code to isolate defects and add functionality safely.
- Work in an Agile (Scrum) team on Azure DevOps - sprint planning, backlog refinement, daily stand-ups and peer code review with product, QA and engineering.

Junior .NET Developer | Vision Infotech | Navsari, India | Feb 2024 - Apr 2025

- Developed and enhanced backend features for enterprise .NET applications, and implemented new modules.

- Gathered requirements directly with clients and internal teams and delivered the corresponding solutions.
- Resolved production incidents and carried out database enhancements and query optimisation.

.NET Developer | Zibma Infotech | Surat, India | Dec 2021 - Jan 2024
- Built ERP web applications used by multiple educational institutions, on ASP.NET and .NET Core Web API.
- Processed and managed datasets exceeding 100,000 records while maintaining application performance.
- Developed role-based reporting modules, and integrated payment gateways (PayPal, CCAvenue) and Google Maps.
- Optimised SQL queries and resolved production issues to improve stability and performance.

PROJECTS

VCDoctor - Telehealth Platform | ASP.NET MVC, SQL Server, SignalR, Firebase, Vonage
- Built backend APIs serving both web and mobile clients.
- Implemented one-to-one real-time messaging with SignalR, and Firebase Cloud Messaging for call notifications and multi-device signalling.
- Integrated Stripe and PayPal for payments, and Vonage for live video consultations.

Zibma School ERP - Education Management System | ASP.NET, .NET Core Web API, SQL Server, Firebase
- Built .NET Core APIs and integrated them into an existing ASP.NET application serving multiple institutions.
- Delivered custom role-based reporting; integrated Google Maps, PayPal and CCAvenue.
- Implemented Firebase notifications for attendance, fee and announcement events.

HRMS - Human Resource Management System | .NET Core, Angular, SQL Server
- Built employee management and payroll functionality; optimised SQL queries and added pagination to reduce page load times.

PROFESSIONAL DEVELOPMENT

Actively deepening, alongside full-time work: .NET runtime internals (async/await state machine, garbage collection, thread pool, ASP.NET Core request pipeline); distributed systems and system design (queue-based architectures, delivery guarantees and idempotency, caching, replication, sharding and consistency trade-offs); SQL internals (indexing, execution plans, transaction isolation); and data structures and algorithms.

EDUCATION

Bachelor of Computer Applications (BCA) | Veer Narmad South Gujarat University (VNSGU), Surat, India | 2017 - 2020

LANGUAGES

English - professional working proficiency (working language in all roles) | Hindi - professional working proficiency | Gujarati - native
