[[DATE]]
[[HIRING MANAGER NAME, or "Hiring Team" if you do not have a name]]
[[COMPANY]]
[[CITY, COUNTRY]]

Dear [[NAME, or "Hiring Team"]],

I am applying for the [[ROLE TITLE]] position [[WHERE YOU SAW IT - e.g. "advertised on your careers page", or the job reference number]].

I am a backend engineer with four and a half years in C# and .NET. Since May 2025 I have worked on a large-scale eDiscovery platform used by US federal agencies - document and email processing at volume, Freedom of Information Act workflows, and multilingual ingestion, in an environment where correctness matters more than speed of delivery. That combination of legal-records domain work and .NET engineering is uncommon, and it is the part of my experience I would bring to your team first.

The work I am proudest of is a pipeline redesign. Our email processing ran as a sequential job taking seven to ten hours. I rebuilt it as an event-driven flow on AWS SES, EventBridge and SQS with concurrent consumers, bringing a full run down to roughly an hour and a half - about 80% faster. Before that I spent two years building multi-institution ERP systems handling datasets of over 100,000 records, and a telehealth platform with real-time messaging over SignalR and integrated payments.

[[WHY THIS COMPANY - two or three specific sentences. Name the product, the technical problem, or the part of the stack you want to work on. Reference something you actually read: their engineering blog, their docs, or a specific line in the job description. Generic praise is worse than writing nothing.]]

On practicalities: I am an Indian citizen based in India and I would require work authorization and sponsorship [[IF CANADA AND YOUR EXPRESS ENTRY PROFILE IS LIVE, SAY SO HERE - it materially changes how this reads]]. I am specifically looking to make this move rather than exploring options, and I can relocate at short notice.

I have attached my resume. I would welcome the chance to talk about the role.

Sincerely,
Rahul Patel
